

Laboratory Porcelain Wares

The Chinese Laboratory Porcelain Ware are made of high purity raw material. The Products thus produced are uniform in quality, compact in structure, impervious to gas infiltration, good in polish and resistant to acids & alkalis, with sufficient mechanical strength, the porcelain can withstand sudden temperature changes without cracks, explosion or deformation. Under normal condition, the glazed pieces can sustain a temperature of 1050 deg C while the unglazed ones a temperature of 1350 deg C. All products are glazed inside and outside except outside bottom.
